FOR IMMEDIATE RELEASE

OASys Two-Stage Evaporative Cooler Offers Big Savings for Homeowners

New Castle, DE June 15, 2009 – OASys, the revolutionary indirect/direct evaporative cooler from Speakman Company is helping homeowners save hundreds on their home energy bills. As the economy continues to struggle, homeowners are still seeking out new ways to save money. The OASys evaporative cooler from Speakman Company is helping homeowners maintain a cool temperature in their homes without an expensive electric bill.

OASys air conditioners qualify for the 30% American Recovery and Reinvestment Act (ARRA) tax credit. In addition to the ARRA tax credit several utility companies in the western and southwestern United States are offering rebates to homeowners who purchase an OASys evaporative cooler for their home. These two benefits coupled together create significant savings for the homeowner. The savings with OASys do not end with tax credits and rebates; by using our breakthrough system, OASys, uses less electricity than air conditioners and other evaporative coolers, creating savings up to 80% in energy costs.

The key to OASys is a unique heat exchanger combined with a single pump/blower configuration. Unlike conventional air conditioning systems, which re-circulate indoor air, OASys continuously conditions and delivers fresh outdoor air - the Outdoor Air System. OASys produces up to 3.5 tons of cooling while using less than 600 watts for an energy efficiency equivalent to better than 40 SEER. Thus OASys lowers energy costs without sacrificing comfort to the user.

For more information about OASys, for a copy of our ARRA Tax credit certificate & to see current rebate offers please visit www.oasysairconditioner.com or email oasys@speakmancompany.com

About Speakman

The Speakman Company was founded in 1869 as a plumbing pipefitting company.
